Summary

Front-end Developer focused on building responsive, user-centered web applications with React, TypeScript, and Tailwind CSS. Skilled in translating designs and product requirements into maintainable interfaces through Agile collaboration, freelance client work, and full-stack personal projects.

Core Competencies

React
Tailwind CSS
Git

JavaScript
Figma
API Integration

TypeScript
Supabase
Agile Development

Projects

SolarRise – Appointment & Admin Dashboard (Chingu Agile Team Project) ([Code](#) | [Site](#))

Tech: React, Vite, JavaScript, Tailwind CSS

- Built interactive appointment scheduling workflows with reusable modal components for timeslot selection, appointment confirmation, and contact form submission.
- Implemented front-end state management and conditional rendering logic to guide users through multi-step scheduling flows based on form input and date selection.
- Developed responsive UI components from Figma designs, focusing on usability, consistent user experience, and maintainable component structure.
- Collaborated with team members through pull requests and code reviews to integrate front-end structures within a shared Agile development workflow.

brilly – AI-Integrated Flashcard App (Two-Person Team Project) ([Code](#) | [Site](#))

Tech: React, Vite, TypeScript, Tailwind CSS, Supabase, OpenAI API

- Built responsive flashcard study workflows in React and Tailwind CSS, focusing on minimizing friction in the study experience through streamlined navigation and interactive UI patterns.
- Integrated OpenAI API functionality to generate AI-assisted topic elaborations for flashcards, implementing asynchronous API interactions and front-end state management for dynamic content rendering.
- Developed front-end logic for flashcard navigation, shuffling, persistence, and conditional rendering while synchronizing user-generated data with Supabase.
- Collaborated on application architecture and feature implementation within a two-person team, contributing to both UI development and database-integrated functionality.

Atlanta Arm Candy (Freelance) ([Site](#))

Tech: Shopify Liquid, JavaScript, CSS

- Customized a Shopify theme using Liquid, JavaScript, and CSS to improve layout, visual hierarchy, and overall user experience.
- Refactored and enhanced responsive front-end layouts across product and collection pages to create a more polished and maintainable shopping experience.
- Applied e-commerce UI and competitor research to guide design improvements and strengthen storefront presentation and branding consistency.

Employment/Experience

Freelance Front-end Developer
Atlanta Arm Candy (Client) | Remote

03/2025 - 05/2025

- Independently managed a Shopify storefront redesign project from requirements gathering through delivery, communicating directly with the client to translate business goals into user-focused UI improvements.
- Redesigned and modernized the storefront using Liquid, JavaScript, and CSS, and Shopify theme customization to improve visual credibility, branding consistency, and overall shopping experience.
- Delivered the redesigned storefront ahead of schedule, with the client reporting increased site traffic and higher sales following launch.

Software Developer
Chingu (Agile/SCRUM Workplace Simulation) | Remote

11/2024 - 12/2024

- Collaborated with a cross-functional Agile team of 9 to build *SolarRise*, a web application focused on solar energy evaluation and installation.
- Contributed to front-end development in React and Tailwind CSS through feature implementation, GitHub pull requests, peer code reviews, and shared responsibility for approving team contributions.
- Translated Figma designs into responsive UI components and interactive user flows while coordinating work through Jira sprint planning and Agile ceremonies.
- Worked closely with teammates to deliver maintainable front-end features across iterative sprint cycles.

Front-end Developer (Volunteer)
Hack for LA | Remote

03/2024 - 06/2024

- Contributed front-end enhancements to a large-scale open-source civic tech project through a GitHub-based issue tracking and pull request review workflow.
- Collaborated within a distributed development team using Kanban-style task management, progressively completing small-to-medium scope implementation tasks.
- Participated in code review and iterative feedback processes while working within an established shared codebase and contribution pipeline.

Histology Technician (IHC) Team Lead
Histology Technician
Laboratory Assistant
Finan Templeton Dermatopathology Associates | Atlanta, GA

03/2023 - Present
02/2022 - 03/2023
08/2021 - 02/2022

- Lead a cross-functional team responsible for 1,000+ immunohistochemistry (IHC) stains per month, balancing throughput, quality control, and turnaround time in a high-volume production environment.
- Improve team productivity by ~20% by optimizing workflows, identifying bottlenecks, and reallocating resources.
- Refine standard operating procedures (SOPs) to improve consistency, reduce errors, and streamline onboarding for new team members.

Education & Certifications

AWS Cloud Practitioner

2025

University of Georgia | B.S.A., Biological Sciences
College of Agricultural and Environmental Sciences | Athens, GA

2018
